

Civil Protection and Provision

The political changes in the world have led to engraving changes. This increases the need for civil Protection. Ensure that you do!

Why Civil Protection

The reactor accident in Tschernobyl and thereby release of Radioactive material

shows us the dangers of Nuclear Plants; the dramatic increase of conflicts locally and also Military not forgetting the increasing numbers of Natural disasters, also computer failures, resource bottle necks and disrupted electricity supply.

In short: Safety is no longer possible without personal provisions and therefore in your interest to be prepared.

Innova Civil Protection

In Cooperation with civil protection experts INNOVA GmbH has compiled its survival offer for precaution in times of crisis and as an investment in the future.

The basis for every precaution action are Eating, Drinking and fresh Air.

The Innova protective provisions with dehydrated foods is your main reserves with its very long shelf life, using very little space and quick to use. Important is also drinking water provision, breathing protection and emergency electricity.

Special Long Storable Foods

Survival Store

In case of crises, radioactive or chemical catastrophes and armed conflicts, the supplying of food will be impossible.

The problem of stocking food is that they waste after a certain time.

Dehydrogenate and freeze drying are the only way to make food storable for many years.

- 4 Cans Cream of herb Soup (Yields 30.80 Ltr)

Price: € 249,- incl. VAT

General information about Dehydrated food

Dehydrated or Vacum packed guarantees a longer shelf life as all other Conservation method. Fresh or dried instant meals are Shock Freezed to retain the taste, colour, Structure and Nutrients. The frozen product is placed in a special vacum room, where the ice is made into gas and rmoved from the food. In this time the goods have lost 90% of their weight and up to 30-90% of their volume. They are then placed in air and wter tight Cans under vacum. The air in the cans are then replaced by nitrogen and then sealed. So can the quality be contained. Is the process reversed and hot or cold water is mixed with the goods so is the product back to its original condition. The lower the lager temperture ,the lower the chemical reaction and therefore the change in the goods. The best lager is in a cool dry place room temperture or less. Rooms like tke attic over 30 grad C should not be used. This damages the goods. Also rooms with large temperture difference should not be used. (Only for short time lager from 3 to 4 years)

All the products undergo Quatily Control and the contense with only the best biological ingriedence. The mixture are put together by food experts with a good balance between vitamens, minerals, roughage and protein. The meals are lightly seasoned and are ideal for small children and older persons.
